

Jr. Software Developer

Team Overview

Our vision is beyond a connected home, rather a smarter home where technology is your friend and not an obstacle. Our fantastic team is focused on next generation distributed platforms for the connected home ecosystem; we solve real life problems and bring improvements to the masses. We are infatuated by technology; however only see it as the means and not the goal itself. We accept no boundaries and no problem should remain unresolved.

Our products and technologies are touched by well over 250 million people every week, and we're just getting started! We designed & developed an extraordinary number of products for the connected home, backed by a complete ecosystem of **data driven embedded software solutions & cloud services** for connected devices from leading brands in mobile, gaming and consumer electronics segments!

As a member of this multi-disciplinary team you will be involved in every aspect of next generation data-driven products. This would require deep understanding of UEI's core technologies as well as technology trends in embedded systems, and consumer electronics. You will always be faced with a new puzzle to solve with current or new technologies with a single goal in mind, an unmatched user experience for our products.

We are all students here, and we do what it takes to achieve the goal. We are looking for a hands-on self-starter to join the fun.

Position in the Organization:

The Junior Software Developer is a member of the software development team and will report to the local Software Engineering Manager, while working closely with the Teams in Bangalore and San Mateo CA.

Must Have
